# Definition of PR

---

**Evidence**-based,

**Multidisciplinary**,

**Comprehensive** intervention

Patients with **chronic respiratory diseases**

Who are **symptomatic** and

often have **decreased daily life activities**.

# Definition of PR

---

- Integrated into the **individualized treatment** of the patient
- PR is designed to
  - reduce **symptoms**
  - optimize **functional status**
  - increase **participation**
  - reduce **health care costs**through stabilizing or reversing systemic manifestations of the disease

# Benefits of PR

## Evidence A

Improves **exercise capacity**

Reduces the intensity of **breathlessness**

Improve health-related **quality of life**

Reduces the number of **hospitalizations**

Reduces anxiety and **depression**

## Evidence B

Improves **survival**

# Effect of PR

---

- Reduce dyspnea
- Increase **exercise performance**
- Improve health-related quality of life (HRQL).
- Reduce **health care costs**

# Chronic Respiratory Disease

**Symptom, Dyspnea, Exercise capacity**

**vs Pulmonary function**

**Chronic Respiratory Disease**

**COPD**

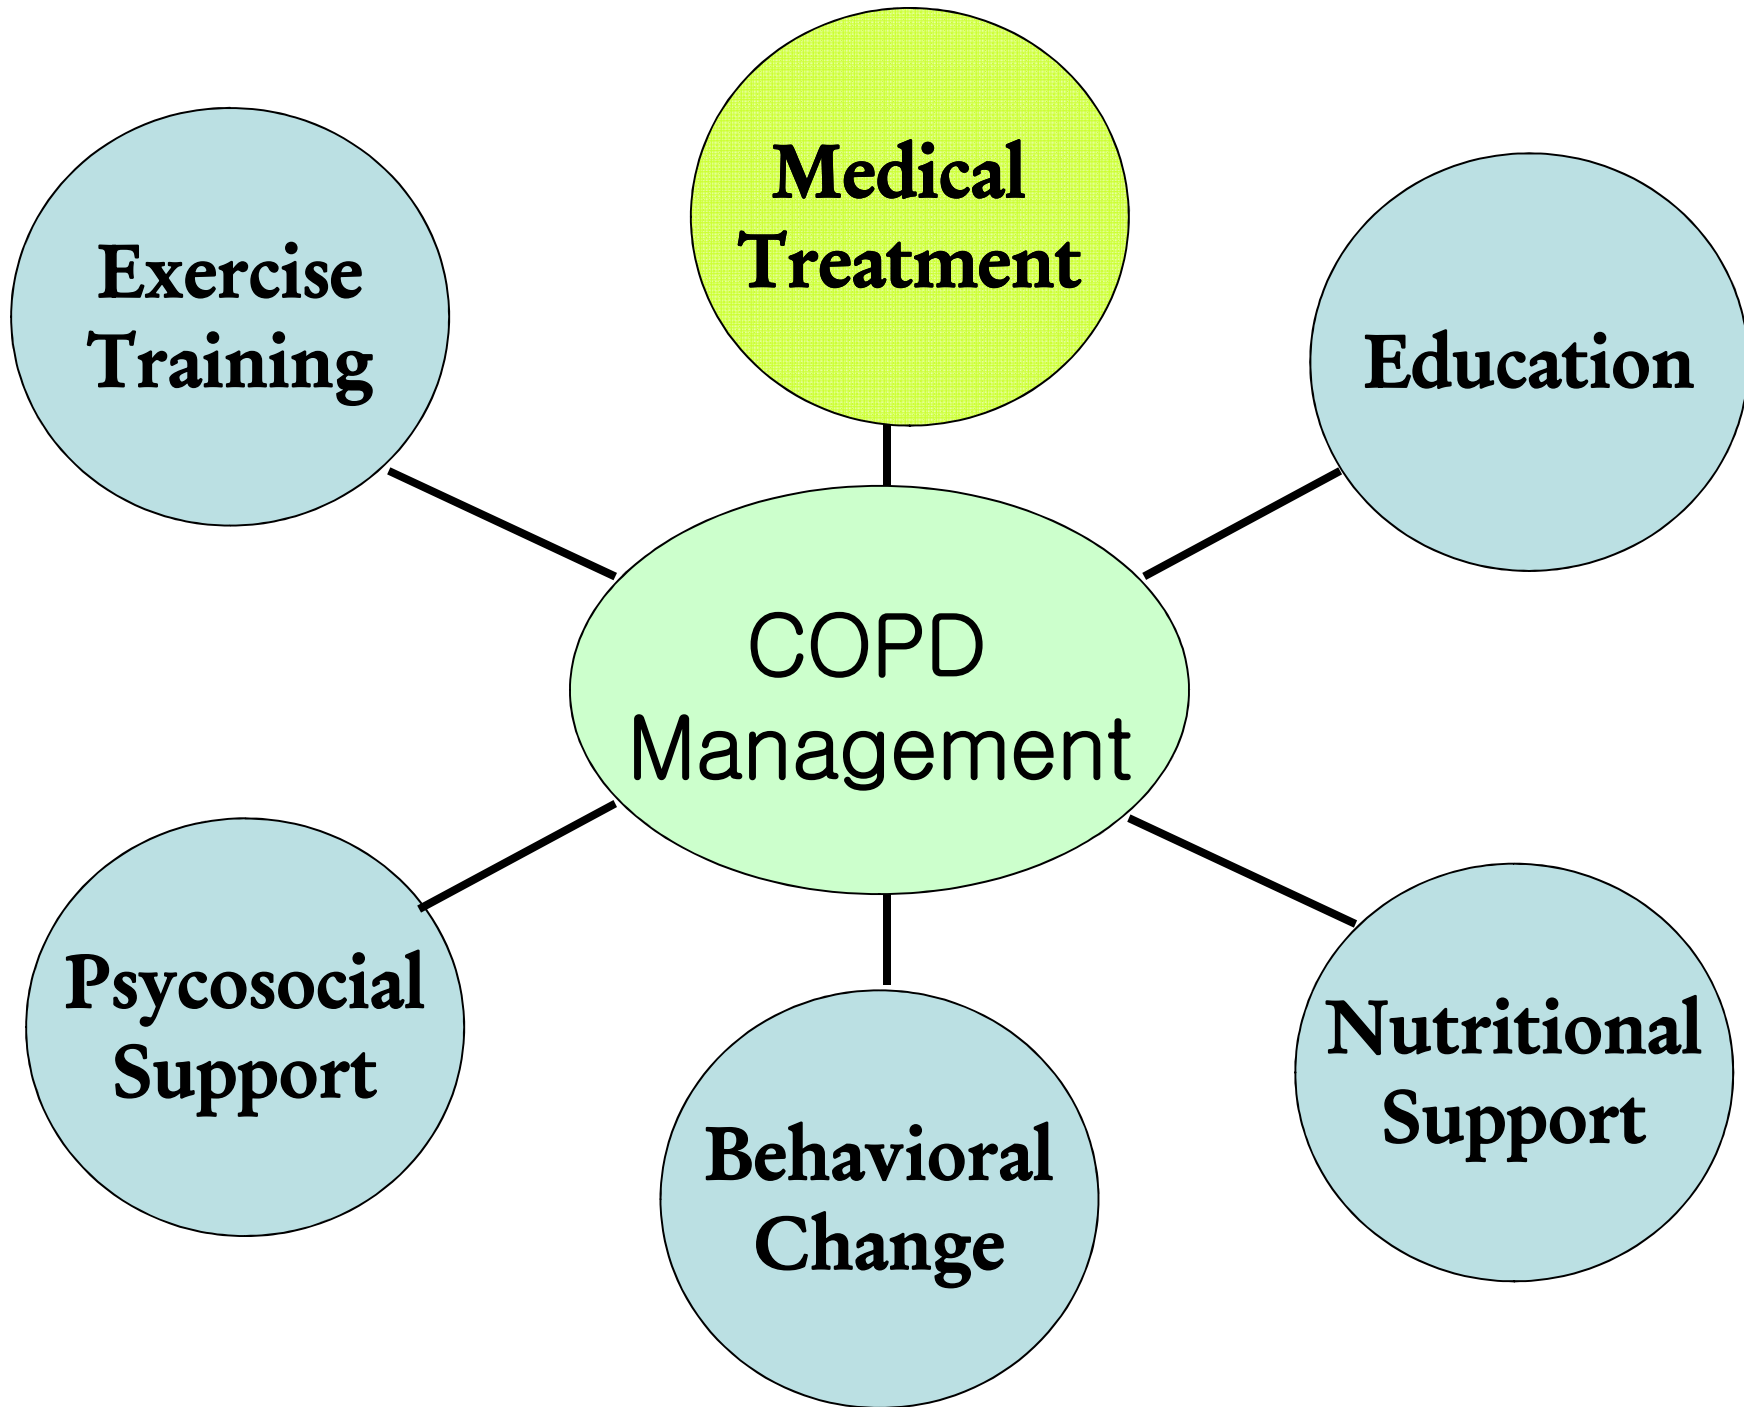

**Tuberculosis Destroyed Lung**

**Bronchiectasis**

**Bronchial asthma**

**Idiopathic Pulmonary Fibrosis**

**Pneumoconiosis**

# Component of PR

---

- **Education**
- **Assessment**
- **Exercise program**
  - Endurance training
  - Strength training
  - Respiratory muscle training
- **Psychological** support
- **Nutritional** support

# The Cycle of Physical, Social, and Psychosocial Consequences of COPD

---

# Exercise Intolerance in COPD

---

- Ventilatory limitation
- Gas exchange limitation
- Cardiac dysfunction
- Skeletal muscle dysfunction
- Respiratory muscle dysfunction

# Ventilatory limitation

---

- Increased dead-space ventilation
- Impaired gas exchange
- Increased ventilatory demands
- Dynamic hyperinflation

# Gas exchange limitation

---

- Hypoxia increases pulmonary ventilation
- Supplemental oxygen
  - decrease in dynamic hyperinflation by lowering respiratory rate
  - decrease in pulmonary artery pressures

# Skeletal Muscle Dysfunction

---

- **Inactivity**–induced **deconditioning**
- Systemic inflammation
- Oxidative stress
- **↓ Muscle mass**
- **↓ Capacity for muscle aerobic metabolism**
- **↑ Lactic acidosis** for a given work rate

# Exercise Training

No changes in lung function

Improve

**Skeletal muscle exercise capacity**

**Oxidative capacity**

Efficiency of the skeletal muscles

- less alveolar ventilation for a given WR
- reduce dynamic hyperinflation
- reduce exertional dyspnea

# Duration and Frequency

---

- **Longer** programs → more training effects
- At least **three times per week**
- Regular supervision of exercise sessions

# Intensity of Exercise

---

- **High** vs Low intensity
- > **60%** of the **peak exercise capacity**  
some physiologic training effects
- Symptom scores  
→ Borg score : 4 to 6
- HR at the gas exchange threshold

# Specificity of Exercise Training

---

- Many activities of daily living involve upper extremities.
- Limb exercises should also be incorporated into the training program
- Arm cycle ergometer, free weights, and elastic bands.

# Endurance and strength training

---

- Endurance
- intensity (60% maximal work rate).
- **> 30 minutes**
- Strength
- two to four sets of 6 to 12 repetitions  
(50 to 85% of one repetition maximum)

# Practice guidelines

---

1. A minimum of 20 sessions, three times per week
2. High-intensity exercise produces greater physiologic benefit  
low-intensity training is also effective
3. Both upper and lower extremity training should be utilized.
4. The combination of endurance and strength training generally has multiple beneficial effects

# Self-Management Education

- Core component of comprehensive PR

### TABLE 3. EXAMPLES OF EDUCATIONAL TOPICS

---

Breathing Strategies

Normal Lung Function and Pathophysiology of Lung Disease

Proper Use of Medications, including Oxygen

Bronchial Hygiene Techniques

Benefits of Exercise and Maintaining Physical Activities

Energy Conservation and Work Simplification Techniques

Eating Right

Irritant Avoidance, including Smoking Cessation

Prevention and Early Treatment of Respiratory Exacerbations

Indications for Calling the Health Care Provider

Leisure, Travel, and Sexuality

Coping with Chronic Lung Disease and End-of-Life Planning

Anxiety and Panic Control, including Relaxation Techniques and Stress Management

---

# Education

---

- Prevention and early treatment of exacerbations.
- End-of-life decision making.
- Breathing strategies.
- Bronchial hygiene techniques.

# Breathing Strategies

---

- Pursed-lip breathing,
- Active expiration
- Diaphragmatic breathing
- Specific body positions
- Coordinating paced breathing with activities.

# Pursed-lip breathing

# 재택 호흡재활 치료 지침

재택 호흡재활치료 연구팀

## 1. 호흡재활치료

1. 정의 및 목표
2. 형태 및 현황
3. 효과

- 1) 운동 수행 능력
- 2) 삶의 질 (QOL)
- 3) 비용절감효과
- 4) 생존률

### 4. 치료 방법

#### 1) 운동 훈련

- (1) 운동훈련의 필요성
- (2) 운동 형태
  - ① 유산소운동
  - ② 근력강화운동
  - ③ 호흡근 운동

#### 2) 교육

#### 3) 정신과적 보조

#### 4) 영양 보조

# 재택 호흡재활 치료 지침

재택 호흡재활치료 연구팀

## II. 재택 호흡재활치료 지침

1. 적응증, 금기증
2. 치료 전, 후 평가 방법
3. 교육:
  - 1) COPD의 정의
  - 2) 치료 방법
  - 3) 호흡 방법 (복식 호흡)
  - 4) 기도 관리, 체위 배농법
  - 5) 긴장 완화법
  - 6) 악화 시 대처 방법
  - 7) 에너지 절약법
  - 8) 예방법
4. 운동 치료
  - 1) 유산소 운동
    - (1) 운동 방법
    - (2) 강도
    - (3) 지속시간, 빈도
  - 2) 근력 강화 운동
5. 정신과적 보조
6. 영양 보조

만성기도폐쇄성질환 임상연구센터  
제 3세부 연구과제

## COPD 와 운동 치료

재택 호흡재활치료 연구팀  
연세대학교 오익금

## 환자 교육용 배부자료

1. 만성 폐쇄성 폐질환이란?
2. 호흡재활이란?
3. 숨이 찰 때는 어떻게?
4. 기관지확장제 사용 방법
5. 호흡 방법
6. 운동 방법
7. 긴장 완화법
8. 영양관리
9. 일상생활에서의  
건강관리/에너지 보존

# Current Status of PR in Korea

# **A simple and easy home-based pulmonary rehabilitation programme for patients with Chronic Lung Diseases**

Joo Ock Na<sup>1</sup>, Dong Soon Kim<sup>1</sup>, Seong Ho Yoon<sup>1</sup>, Yang Jin Jegal<sup>1</sup>,  
Woo Sung Kim<sup>1</sup>, Eung Suk Kim<sup>1</sup>, Myung Wha Kim<sup>2</sup>

Table 2. - Changes in the Parameters of Incremental Exercise Test

Variables	Rehabilitation Group		
	Baseline	12 weeks	<i>p</i> value
WR max (watts)	59.0 ± 25.8	65.0 ± 26.4	0.041
VO <sub>2</sub> max (L/min)	0.85 ± 0.31	0.90 ± 0.31	0.027
AT (L/min)	0.74 ± 0.22	0.73 ± 0.24	NS
O <sub>2</sub> pulse (ml/beat)	7.64 ± 3.26	7.72 ± 3.17	NS
HR max (beats/min)	129.9 ± 19.5	131.6 ± 17.3	NS
V <sub>E</sub> max (L/min)	36.6 ± 12.1	38.1 ± 11.1	NS
Dyspnoea (Borg scale)	8.78 ± 0.54	8.78 ± 0.78	NS

Table 3. - Changes in the Exercise Endurance, 6 Minute Walking

Variables	Rehabilitation Group		
	Baseline	12 weeks	<i>p</i> value
Lower extremity			
Duration (min)	8.2 ± 3.5	14.0 ± 4.5	0.001
Work (Watts)	41.5 ± 17.5	46.5 ± 19.0	0.005
Upper extremity			
Duration (min)	5.9 ± 3.2	6.8 ± 3.4	0.001
Work (Watts)	16.2 ± 8.0	19.7 ± 8.5	0.001
6 min walk(m)	470.7 ± 63.2	508.4 ± 61.1	0.001
Mean SaO <sub>2</sub> *	89.9 ± 5.50	88.5 ± 5.94	NS
Min SaO <sub>2</sub> **	86.1 ± 7.12	83.8 ± 7.66	NS
MIP (cm H <sub>2</sub> O)	80.0 ± 29.5	103.5 ± 35.2	0.001

**The Effect of Pulmonary Rehabilitation in Patients with Chronic Lung Disease**

# Location of PR

---

- 1) Inpatient PR**
- 2) Out-patient based PR**
- 3) Home-based PR**

# Home-based PR

- Indication :

Stable COPD without exacerbation within 3 months

- PR program :

12 weeks, Home-based exercise training

Visit sport medicine clinic ; every 2 weeks

Education, Self management

- Outcome

Exercise capacity, QOL

# Home-based PR

- PR program
  - 1) Endurance exercise ( Walk)
  - 2) Strength training
  - 3) Respiratory muscle training
  - 4) Patient education
  - 5) Nutritional counselling
  - 6) Psycosocial counselling

## Assessment

Spirometry, Lung volume, DLCO

6 min walking test, Exercise PFT

SGRQ, IPAQ

Chest X-ray, Lab.

**Figure 1.** Index of work ( $6M_{work}$ ) was better correlated to peak oxygen uptake ( $VO_2$ ) than 6-minute work distance (6MWD). Scatterplot of peak  $VO_2$  to 6MWD ( $r=0.415$ ,  $p=0.016$ ) (A). Scatterplot of peak  $VO_2$  to  $6M_{work}$  ( $r=0.597$ ,  $p < 0.001$ ) (B).

# Result

- Total number : n = 20 male patients
- FVC :  $2.93 \pm 0.91$ , ( $80.9 \pm 23.1\%$ )
- FEV1 :  $1.41 \pm 0.52$ , ( $60.7 \pm 20.6\%$ )
- FEV1/FVC :  $52.4 \pm 15.2\%$
  
- $VO_2\text{max}$  : **13.9**  $\pm 3.8 \rightarrow$  **15.0**  $\pm 3.7$  l/kg/min
- $VO_2\text{max}$  :  $65.0 \pm 15.6\%$
- 6 MWD : **387** m  $\pm 37 \rightarrow$  **480**  $\pm 51$  m

# Result

- SGRQ score
- Total :  $44.5 \pm 15.1$
- Symptom :  $44.1 \pm 15.0$
- Activity :  $70.4 \pm 19.3$
- Impact :  $29.9 \pm 19.7$
- IPAQ
- Low : 13
- Moderate : 7

# Step Test, Shuttle walking

- **Safe, Easy**

  - Predict  $\text{VO}_2\text{max}$

  - Replace the Exercise CPX

  - Apply to the general population

- **Modified YMCA 3 min Step Test**

# Step Test, Shuttle walking

- **Safe, Easy**
  - Predict  $\text{VO}_2\text{max}$
  - Replace the Exercise CPX
  - Apply to the general population
- **Modified YMCA 3 min Step Test**

1-min. Post-Exercise Recovery Heart Beat Count (HBC)

**Table 3.** Prediction equations for  $VO_2$ max from 15-s and 1-min HBCs

Group	15-s HBC	1-min HBC
All ( $N = 44$ )	$y = -0.9675x + 77.643$	$y = -0.2805x + 76.710$
Women ( $n = 22$ )	$y = -0.7764x + 67.344$	$y = -0.2021x + 64.209$
Men ( $n = 22$ )	$y = -1.1114x + 87.130$	$y = -0.3143x + 84.841$

*Note.* HBC = post exercise recovery heart beat counts;  $VO_2$ max = measured maximal oxygen consumption; All = females + males;  $x$  = HBC;  $y$  = predicted  $VO_2$ max.

# PR Insurance Coverage

- 호흡재활치료 보험 산정기준
- 유발성흡기폐활량계 - 호흡운동
- 체위배액치료
- 호흡재활치료
- 30분 이상 실시한 경우
- 6,110원입니다.

# Incentive Spirometry

# 고빈도흉벽진동요법

이학요법료 3,050원/일

# High frequency oscillation chest physiotherapy

# 재택 호흡재활 프로그램

- 비급여 운동, 교육 프로그램
- 서울 아산병원 : 12주, 6회, 14만원
- 일산 백병원 : 12주, 7회, 11만원
