

Why TRI?

Aspect from the year 2020 of Japan

Nantan General hospital

Takashi Okada

Social Concern?

“Warning from the year 2020”

published from
Japan Economic
Newspaper company

definition

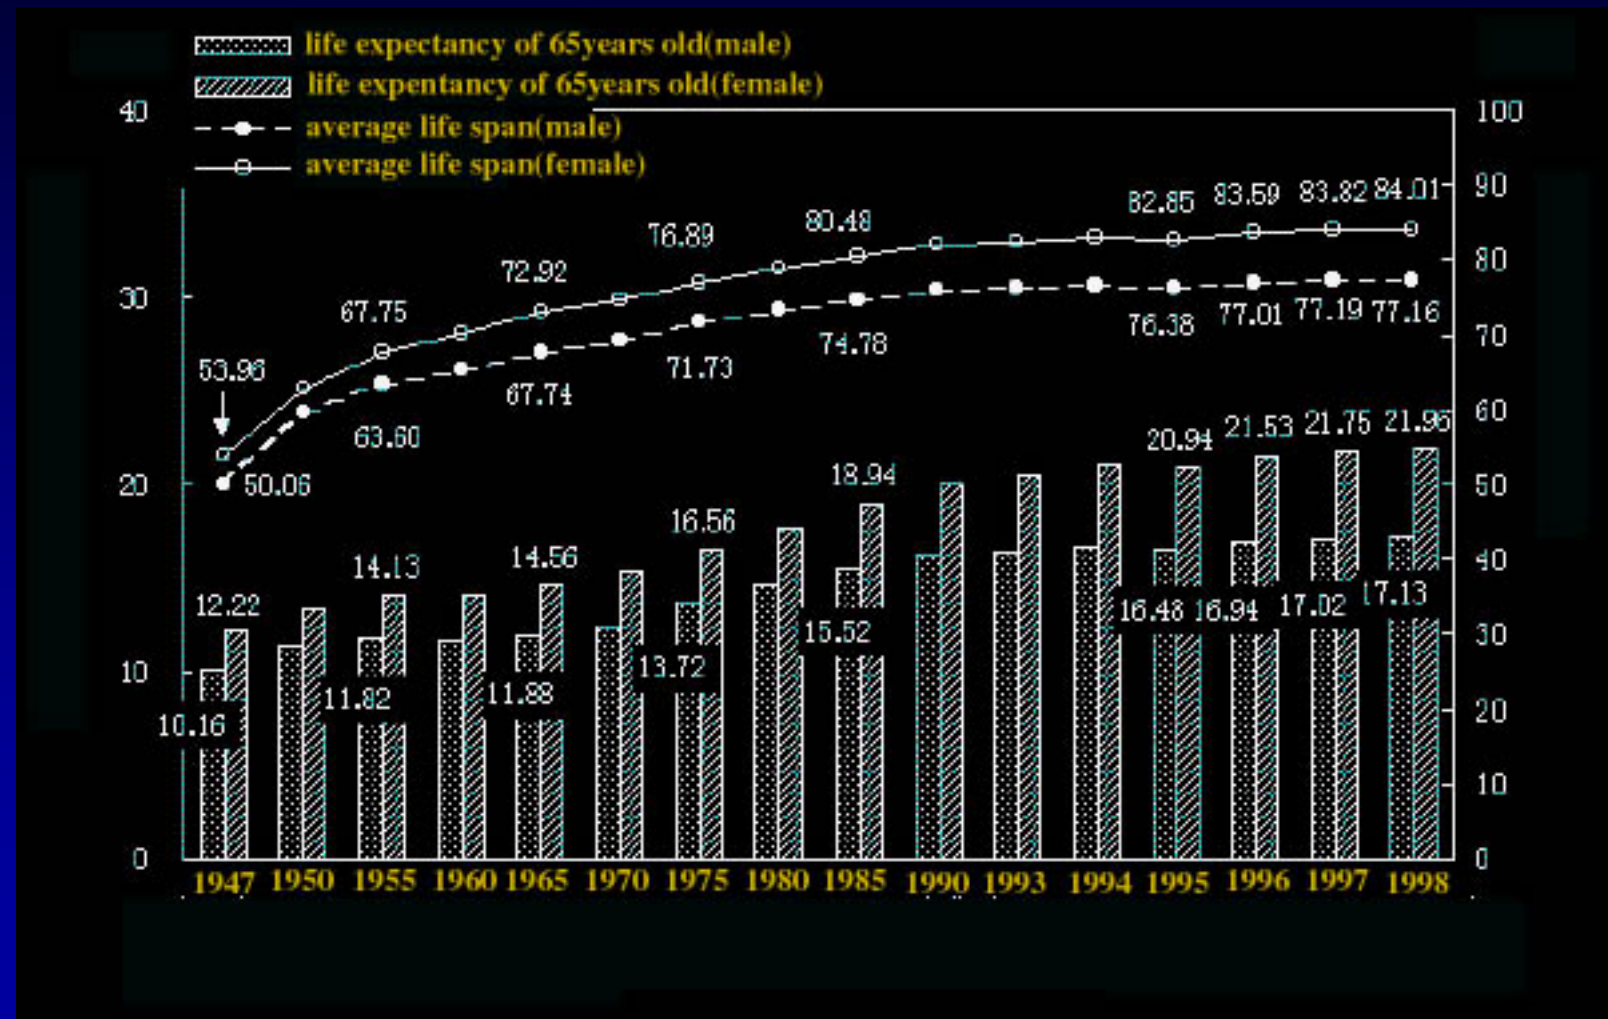

High age

:people 65 years old and over

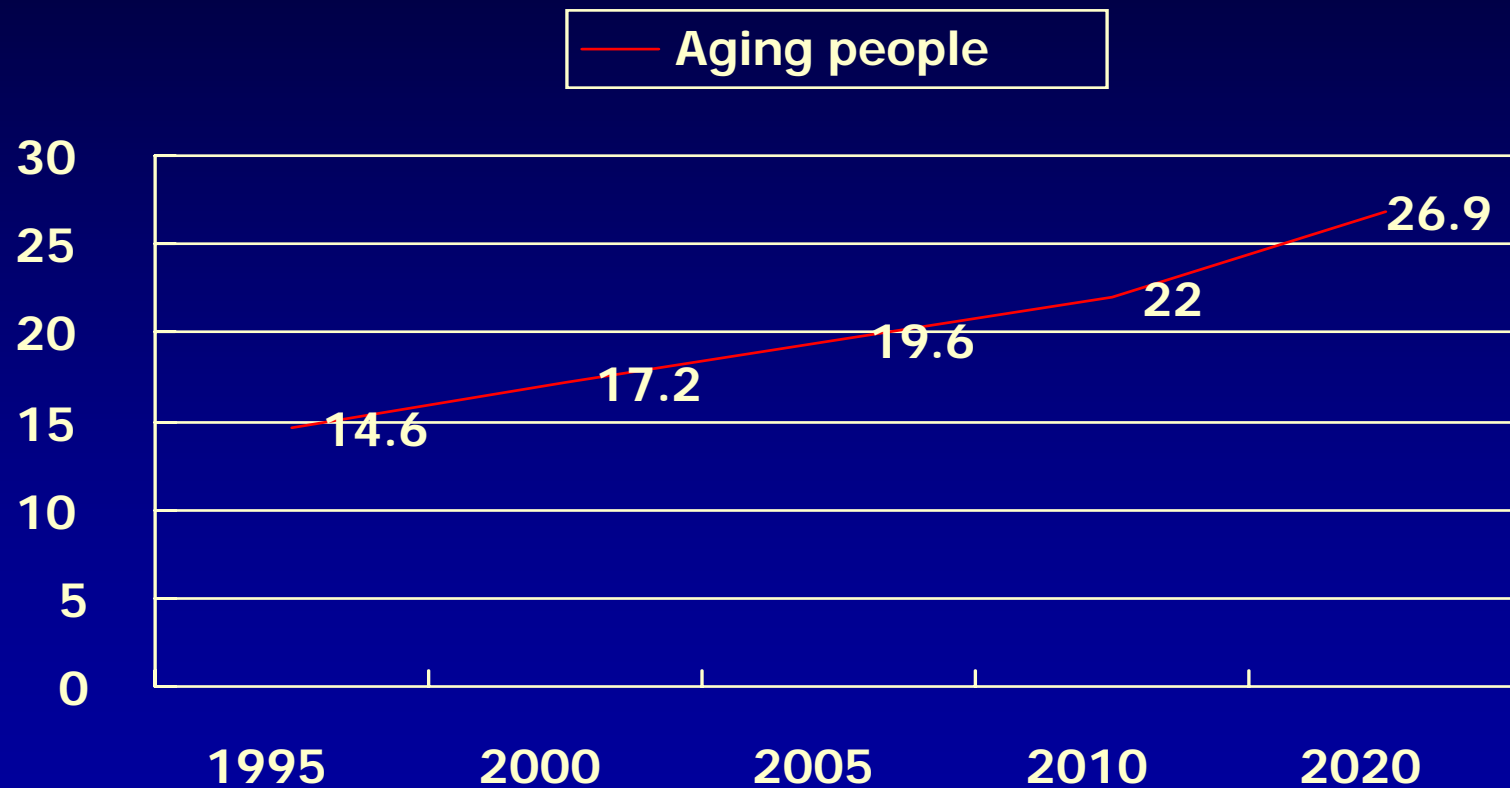

Ageing society

**:Ratio of people 65 years old and over
against total population reaches 25%.**

Back ground 1

Percentile of High aged people

Cited from the white paper

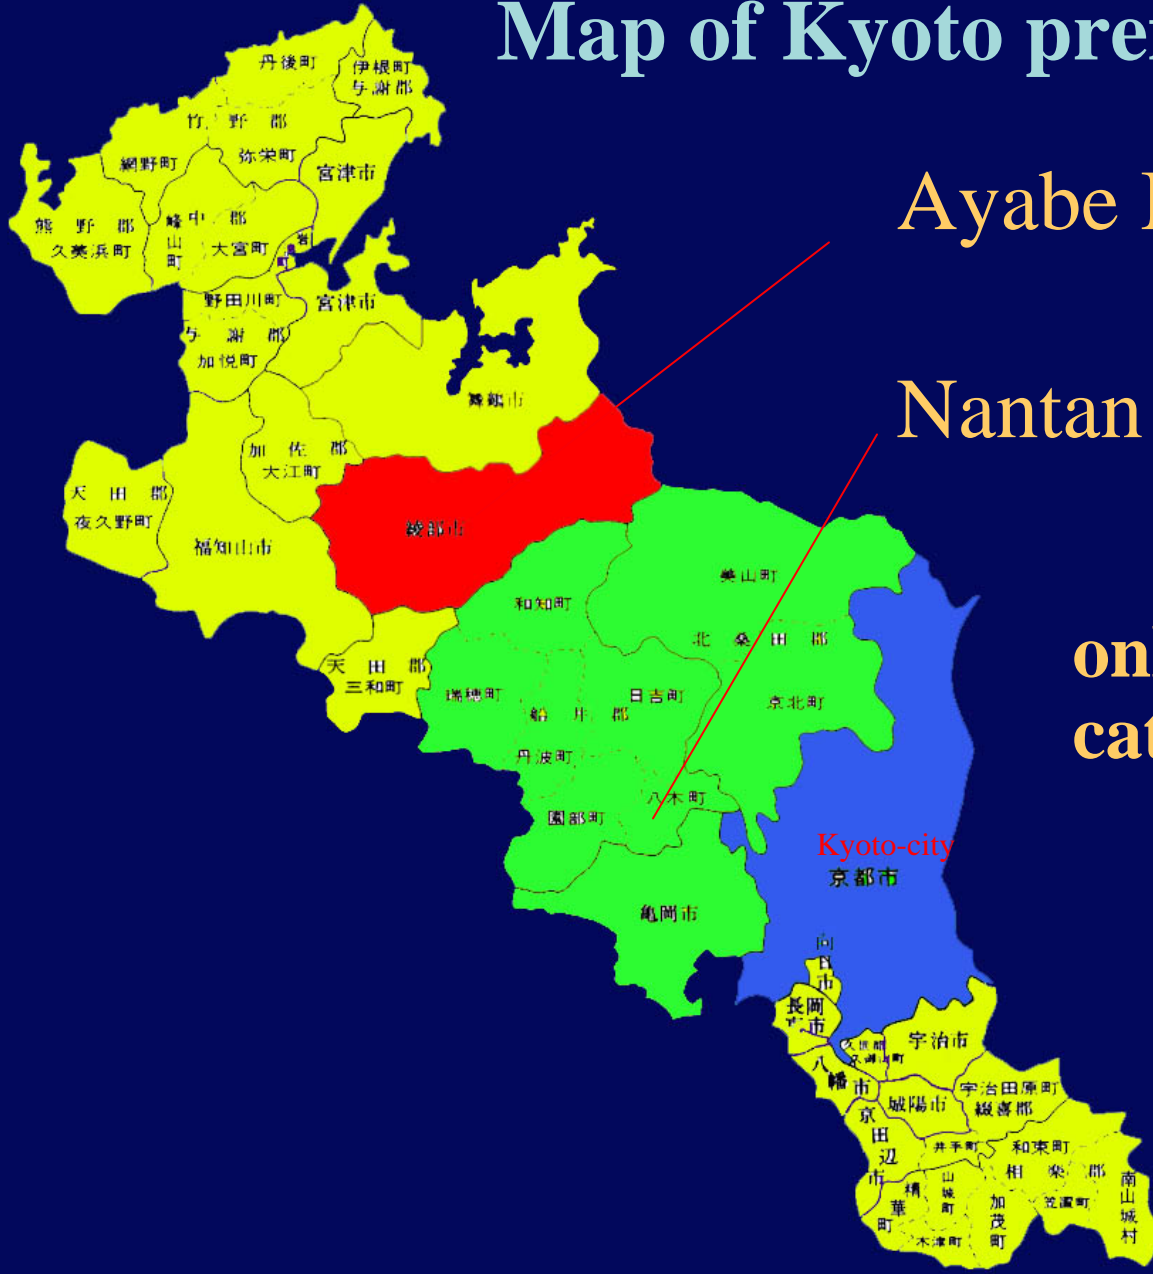

Ayabe city

**Already
high aged!**

**predicts the
future of
Japan**

Map of Kyoto prefecture

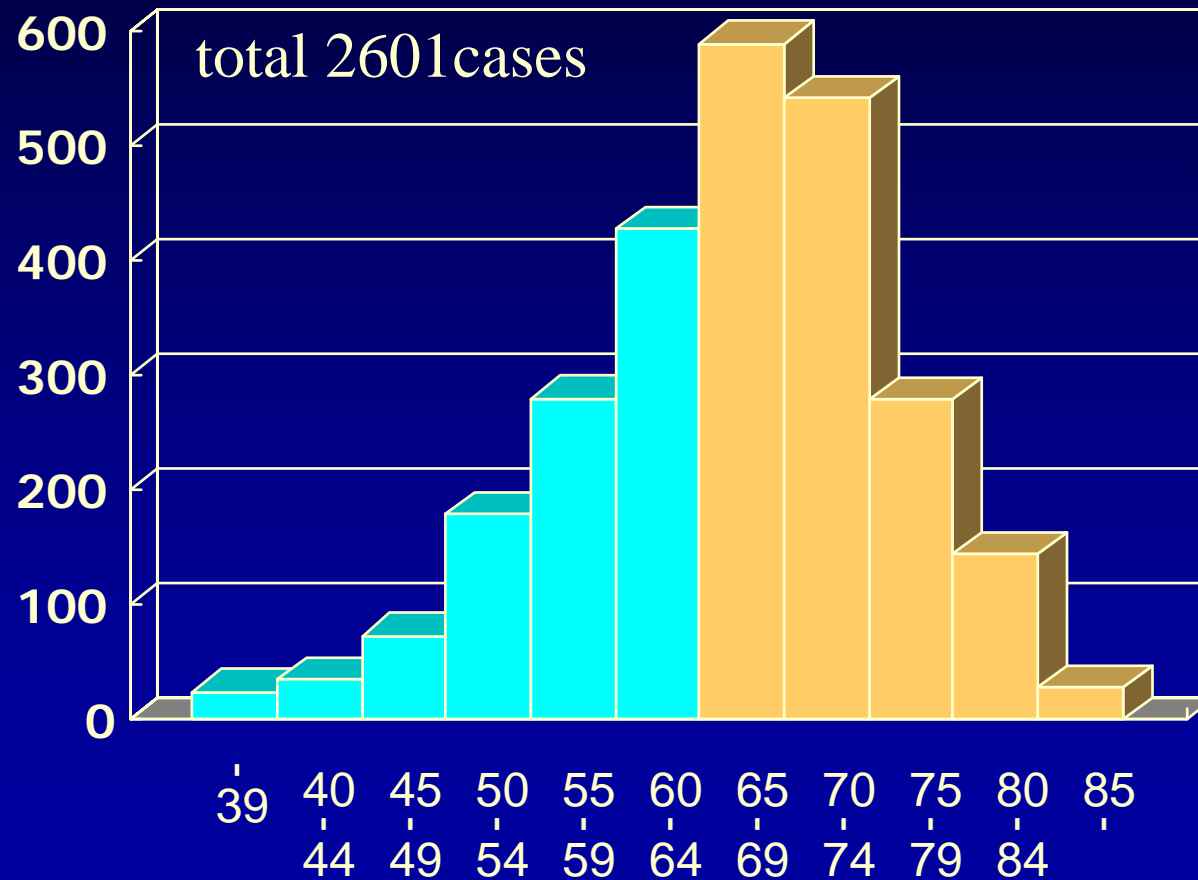

Ayabe Municipal hospital

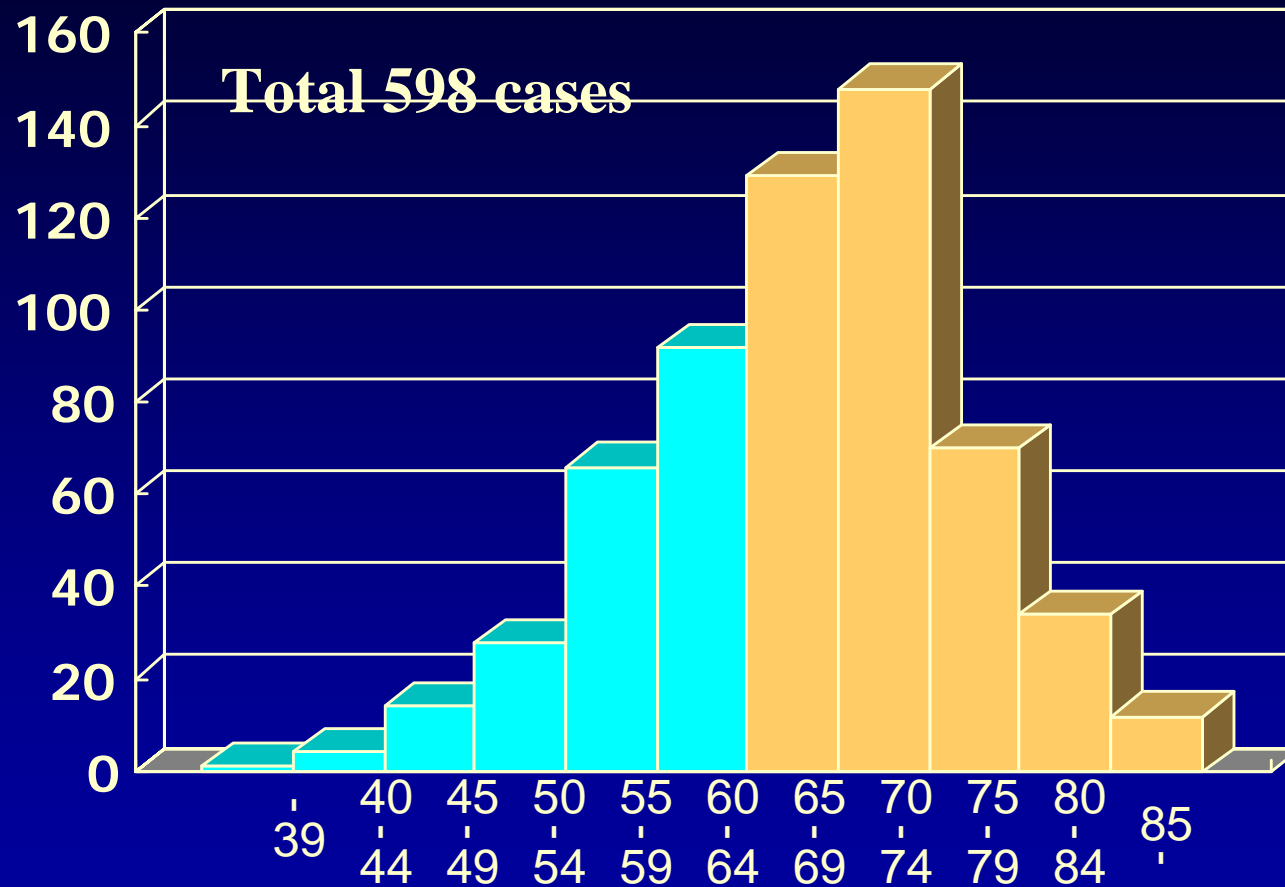

Nantan General Hospital

only one hospital with
cath-labo in each area.

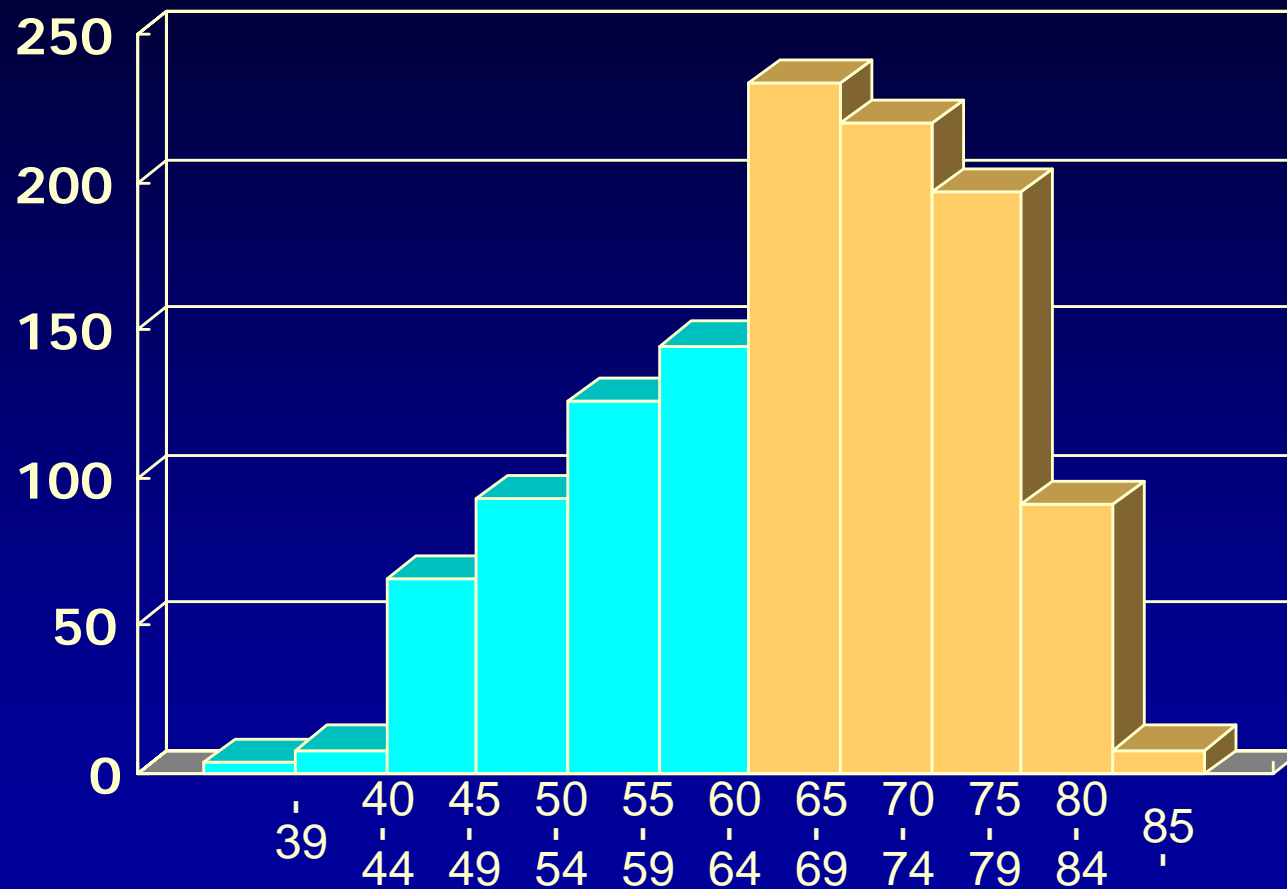

Age distribution of CAG in Ayabe

Age distribution of PCI in Ayabe

Age distribution of PCI in Nantan

Japanese operators think that~

- 1: Ischemic heart disease is caused by stenosis or obstruction. Coronary arteries should be totally revascularized.**
- 2: PCI is less invasive than CABG especially for the high aged .**
- 3: Patients ask for the best treatment.**
- 4: Treatments without PCI are regarded “neglect”**

Japanese operators continue to think

5: Doctors' comment on the medical costs have been regarded brutal or inhuman..

6: The more PCI cases, the more income, supported by full insurance. Reimbursement price system.

7: Nobody pains(physician, hospital, patients, family)

Common features of Korea and Japan

1: Hold the ancestors in veneration.
Confucianism and Buddhism

2: Work very hard, filled with
enthusiasm

3: Recent economic growth.

Frequent complication of the elder

1:groinal hematoma

2:pulmonary embolism

What you get by TRI

1:Patients greet you with smiles
soon after procedure

2:Smiles of nurses and patients' family
encourage you

Age distribution of PCI will be in 2020
