

*10th Angioplasty Summit 2005*  
*April 28<sup>th</sup> -30<sup>th</sup> 2005*

# **Abciximab Eluting Stent in Acute Coronary Syndrome**

**Myung Ho Jeong, MD, PhD, FACC, FESC, FSCAI**

**The Heart Center of Chonnam National University Hospital,  
Applied Chemical Engineering of Chonnam National University**

**Gwangju, Korea**

# Drug Eluting Stent

*PTCA*

*BMS*

*DES*

**RS** → 30~40% → 15~30% → 0~9%

***DES: Very promising, NOT perfect !***

# Autopsy Findings Died of Stroke After BMS and DES

**RCA - Bare metal stent  
(24 months)**

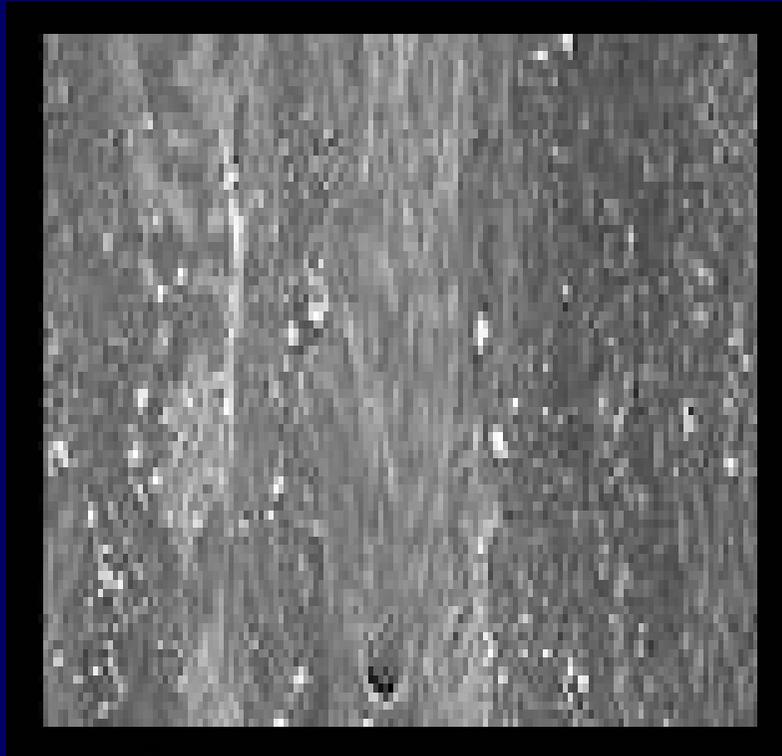

**LAD - Thrombosis**

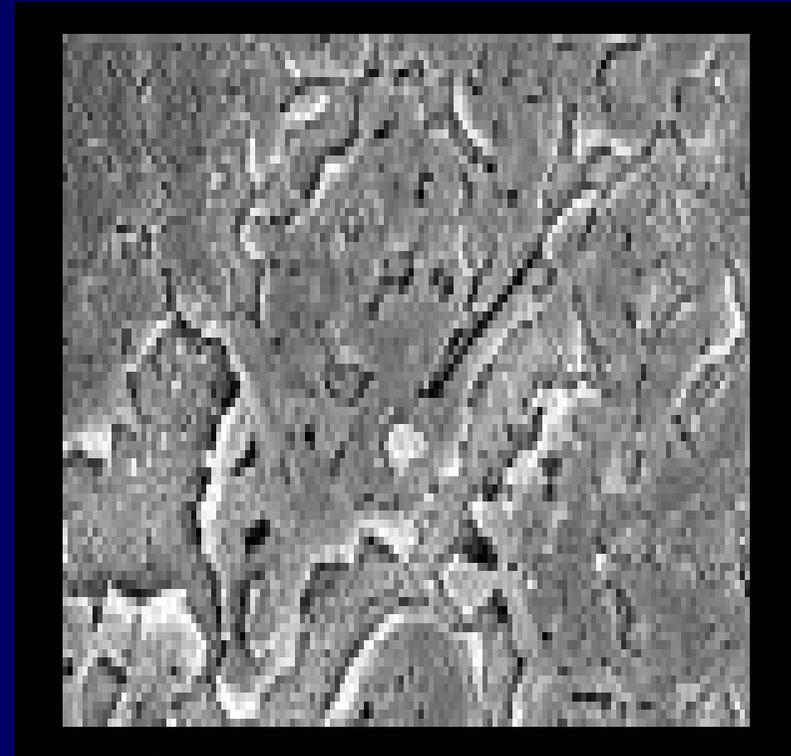

**LAD - Sirolimus eluting stent  
(16 months)**

# Delayed Endothelization and Platelet Deposition in DES

High power SEM

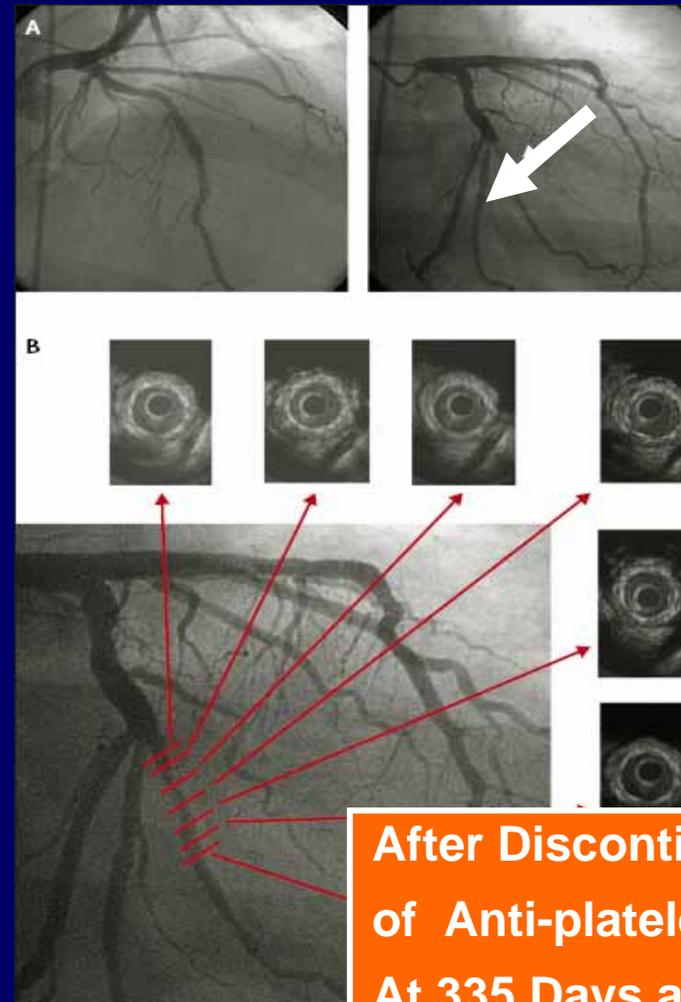

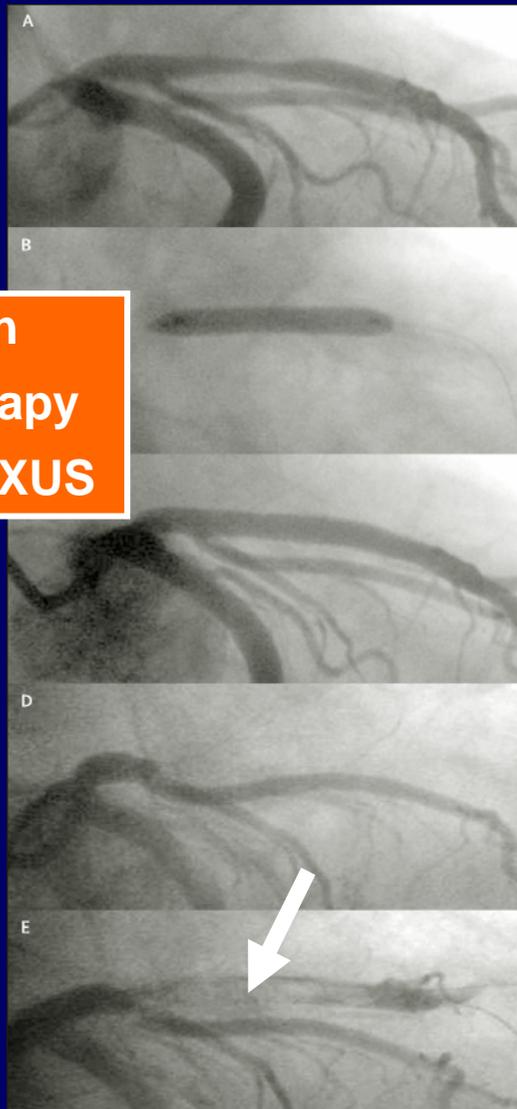

**RCA -Bare metal stent  
: Confluent endothelial  
cells and few platelets**

**LAD-Sirolimus eluting stent  
: Non-confluent endothelial cells  
and multiple platelet thrombi**

# Late Stent Thrombosis in DES After Discontinuation of Anti-platelet Therapy

After Discontinuation  
of Anti-platelet Therapy  
At 343 Days after TAXUS

After Discontinuation  
of Anti-platelet Therapy  
At 335 Days after CYPHER

*Thoraxcenter. Lancet 2004;364:1519-21*

# ***DES: Things We Should Overcome...***

- **Stent thrombosis - early or late**
- **Polymer-mediated inflammation**
- **Local hypersensitivity of Drug**
- **Availability of coating methods**
- **In specific lesion**  
such as **ISR, bifurcated lesion, CTO, DM, SVG, diffuse long lesion ....**

# Animal and Clinical Experiences of New Coronary Stents

## 1. Bare Metal Stent

MAC stent, Freedom stent, Arthos (Carbon coated) stent

PICO (Co-Cr) stent, Core stent

## 2. Radioactive (Ho-166) stent

## 3. Drug-eluting stent

Heparin stent, Paclitaxel eluting on Carbon stent

**ReoPro<sup>®</sup> stent**, Anti-oxidant (carvedilol) eluting *BodyVisio* stent

Echinomycin-heparin double coating on Co-Cr stent

Phospholipid coating biocompatible stent

## 4. Gene-coated stent

Natural polymer (LMWSC)-mediated gene coating stent

# Platelet GP IIb/IIIa Inhibitor

## Abciximab (ReoPro<sup>®</sup>)

- **Platelet activation and aggregation**
  - induces arterial thrombosis
  - play a pivotal role in the pathophysiology of ACS
- **Inhibitors of platelet glycoprotein IIb/IIIa receptor**
  - has expanded the therapeutic options for treating thrombotic disorders
- **Abciximab**
  - a potent inhibitor that block final pathway of platelet aggregation
  - decreases short- and long-term event rates after percutaneous coronary intervention

# Platelet GP IIb/IIIa Inhibitor

## Abciximab (ReoPro<sup>®</sup>)

### ◆ **Abciximab**

- similar receptor binding affinity for the vitronectin receptor present on smooth muscle cells, endothelial cells, platelets

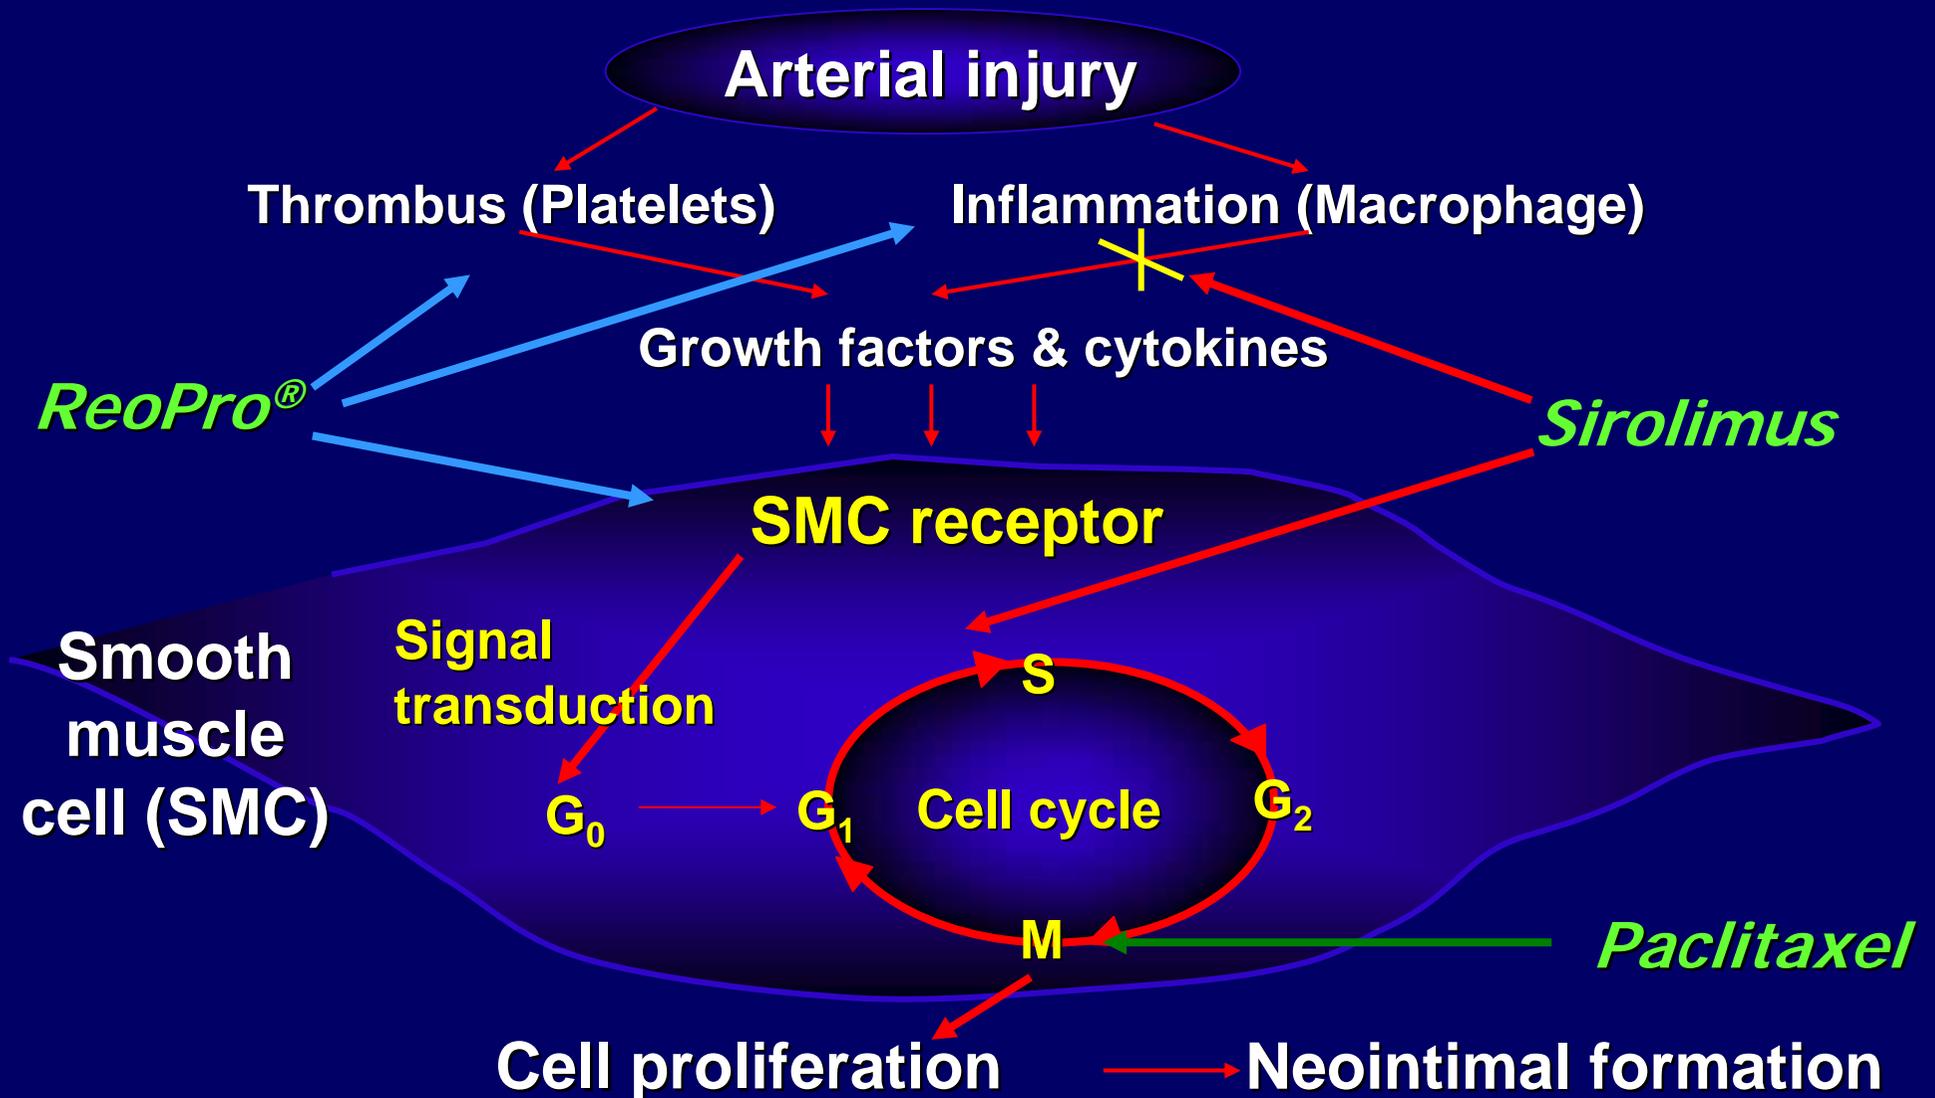

### ◆ **Vitronectin receptor blockade**

- may inhibit smooth muscle cell migration and proliferation after acute arterial vessel injury.

### ◆ **CD11b/18 or macrophage-1 receptor** present on neutrophils and monocyte

- modulates white-cell adhesion, white-cell-platelet interactions, and the inflammatory response to vessel injury
- MAC-1 receptor is upregulated after PCI and is inhibited by abciximab

# Therapeutic Mechanisms

# **Expected Clinical Implications of Abciximab (ReoPro<sup>®</sup>)-coated Stent**

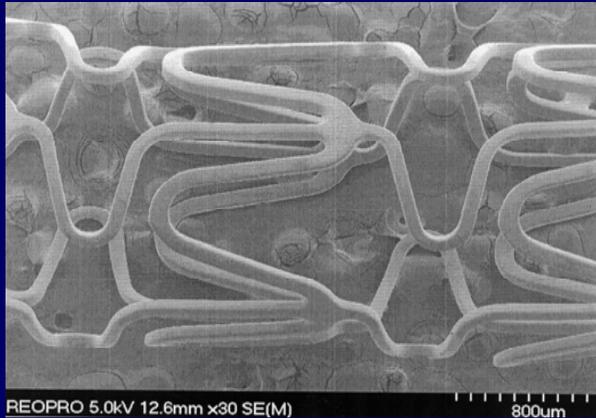

**Effective in Thrombus Burden Lesion**

**Possible short course of anti-platelets**

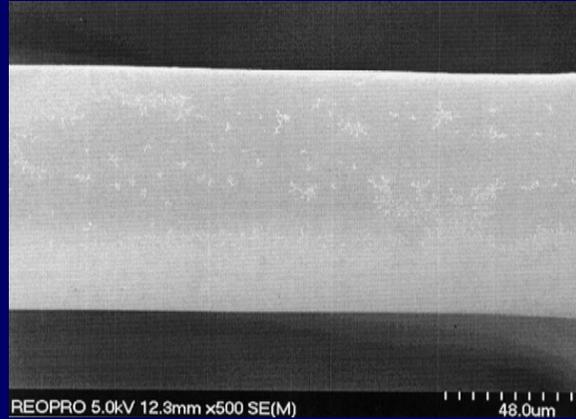

**Reduce restenosis rate in diabetes**

**Cost effective and safer than Cypher or TAXUS**

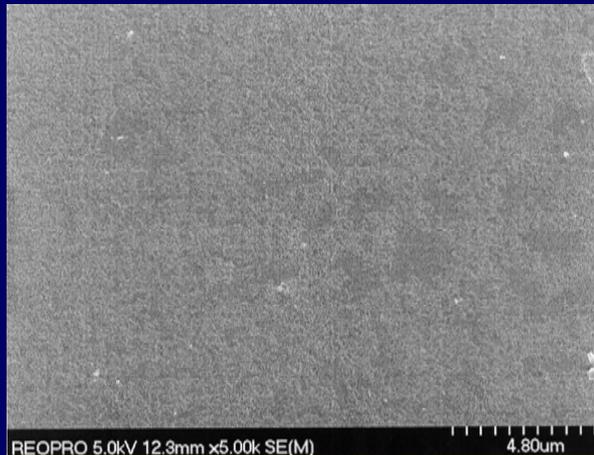

# Scanning Electron Microscopy of ReoPro<sup>®</sup> Stent

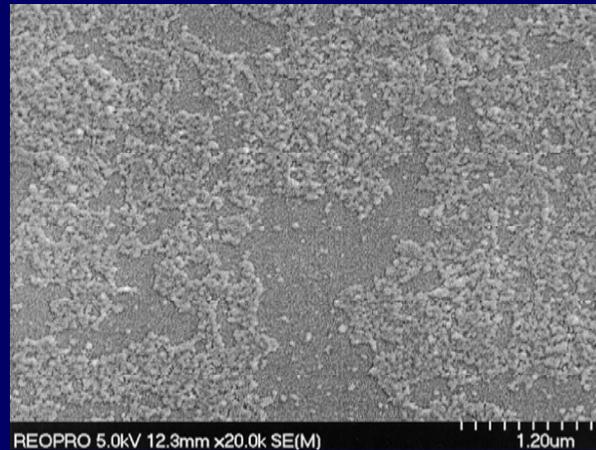

1 X 30

1 X 500

1 X 5,000

1 X 20,000

Stent surface coated  
Plasma polymerization  
Amine coating  
(Diaminocyclohexane)

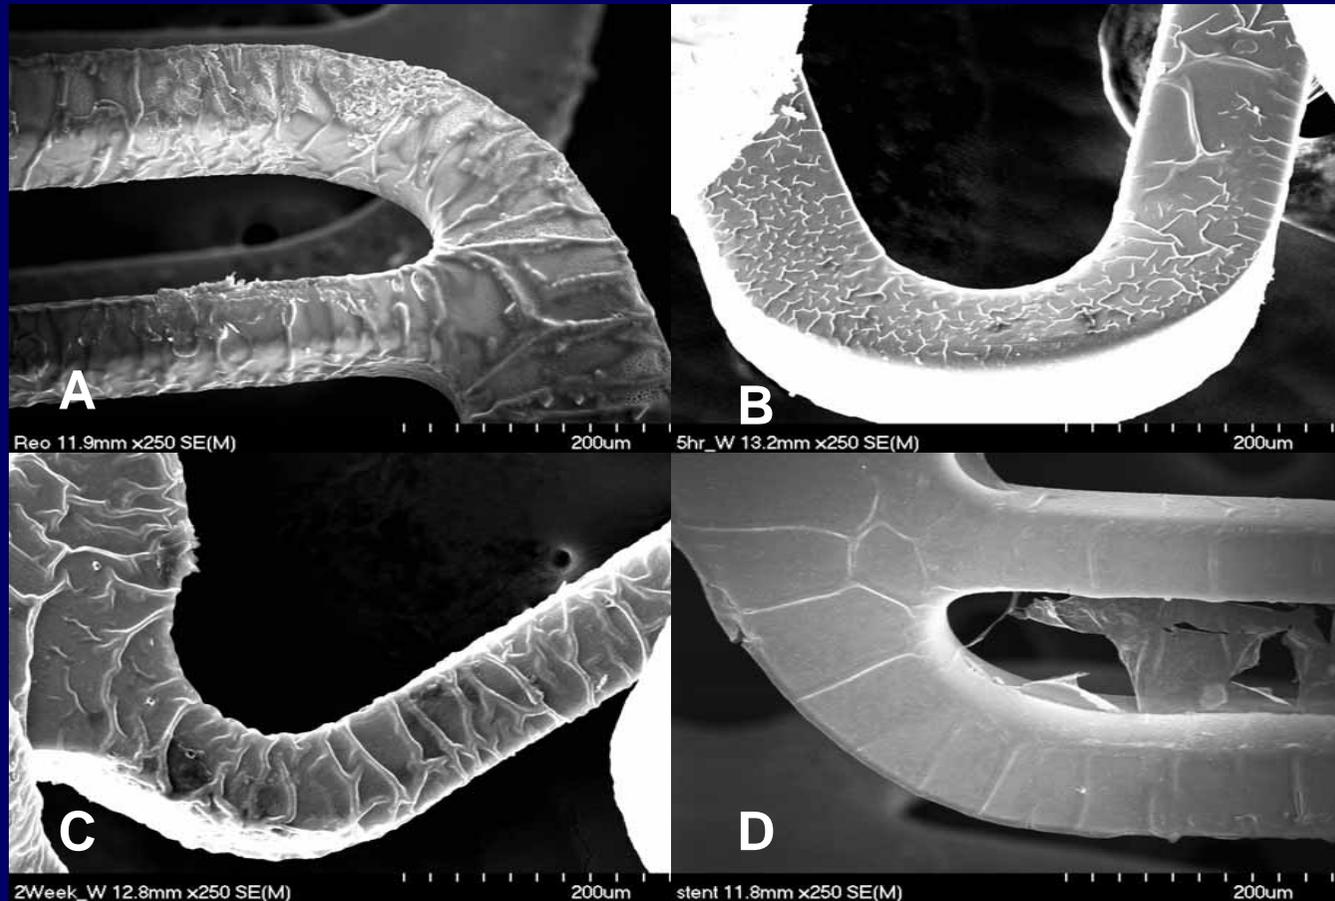

Stent ReoPro<sup>®</sup> Grafting

Amine and COOH

The weight of ReoPro<sup>®</sup>  
about 90  $\mu\text{g}$

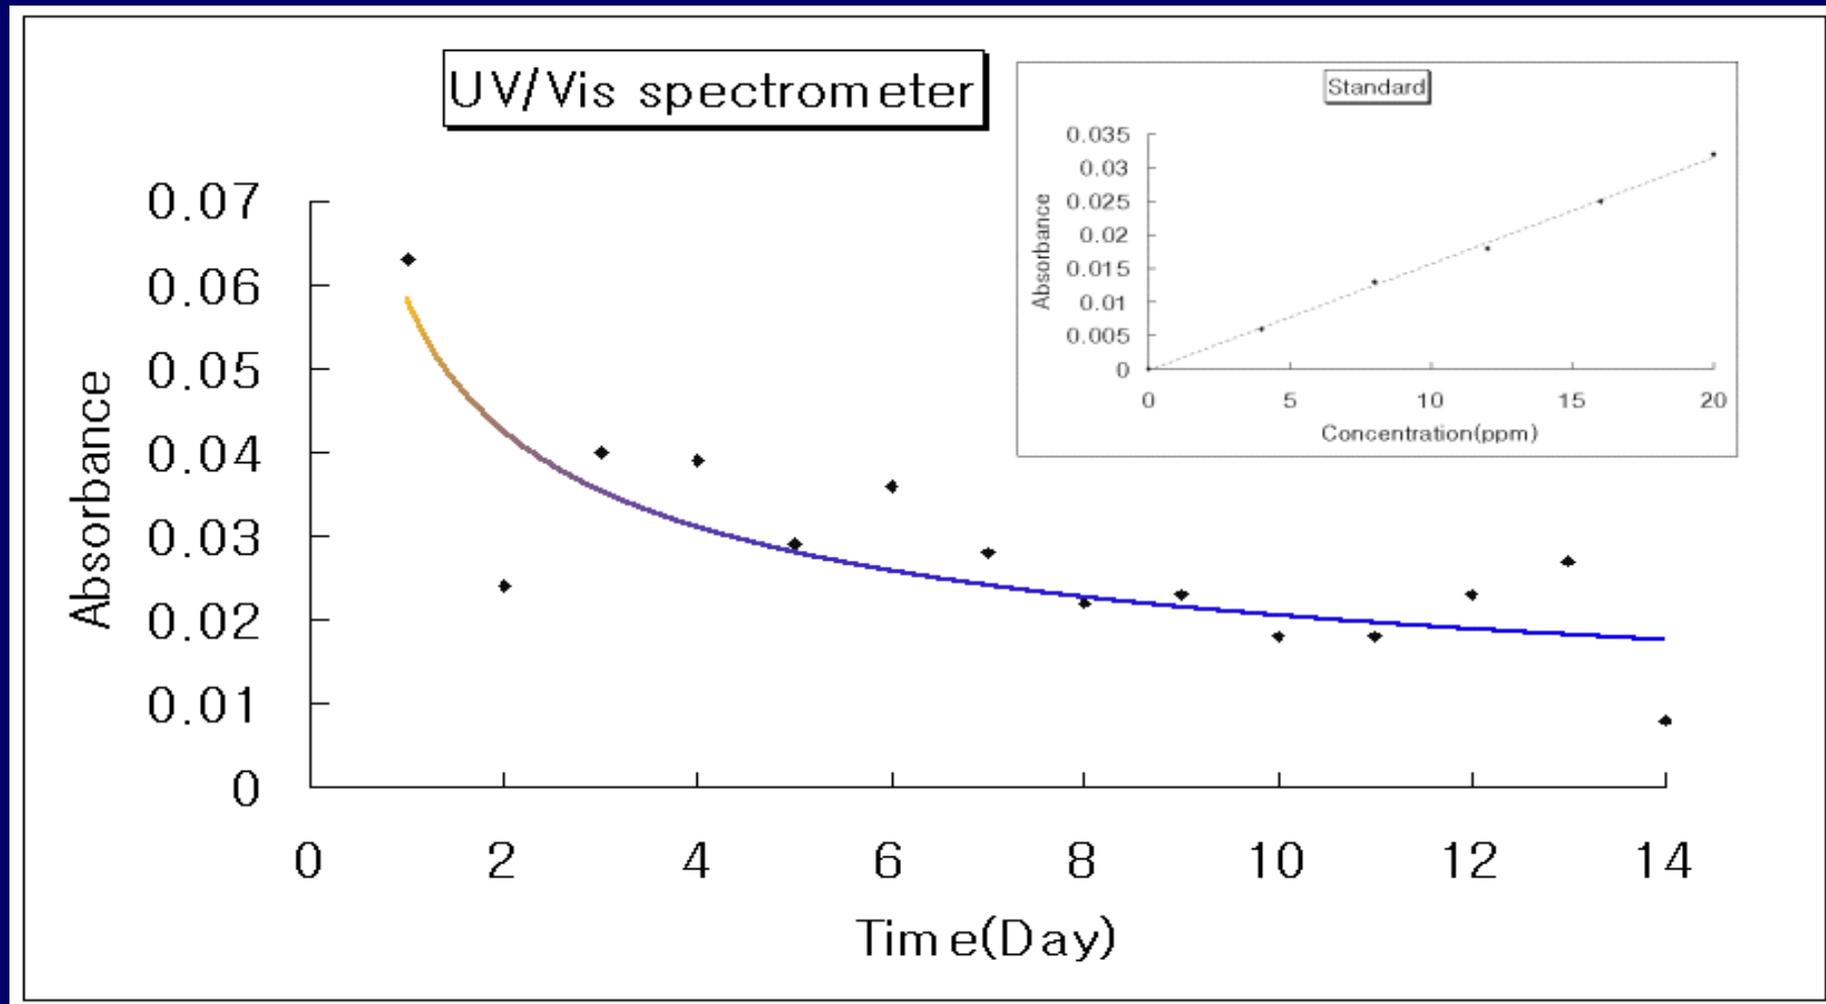

The thickness of coating  
about 0.5 - 2  $\mu\text{m}$

# SEM of ReoPro<sup>®</sup> Grafting after Washing Test

Stent surface of ReoPro<sup>®</sup> grafting; immediately(A), 5 hours(B), 2 weeks(C), 4 weeks(D) after washing test. Magnification 250×

# In vitro Screening of ReoPro<sup>®</sup> Release from Stent

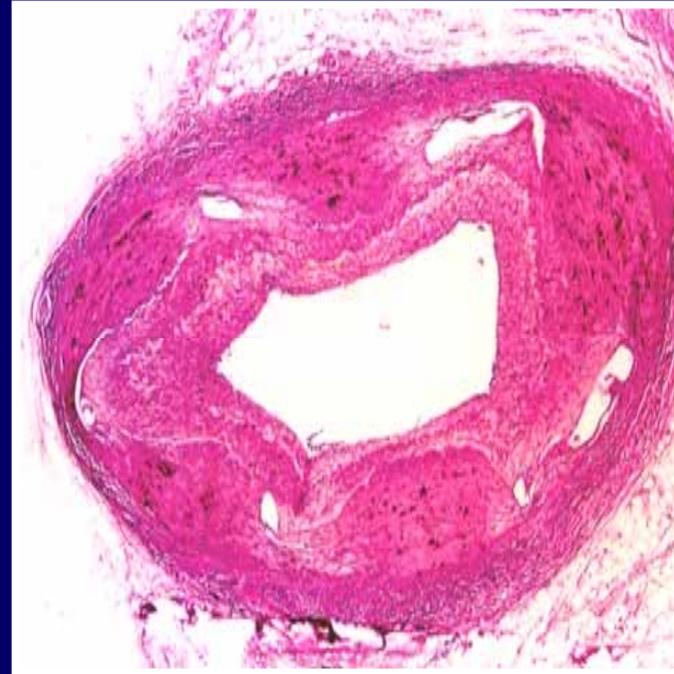

Upper panel revealed absorbance in concentration of control drug

# ReoPro<sup>®</sup>-coated Stent in A Porcine Stent Restenosis Model

**ReoPro<sup>®</sup>  
Stent**

**Bare  
Stent**

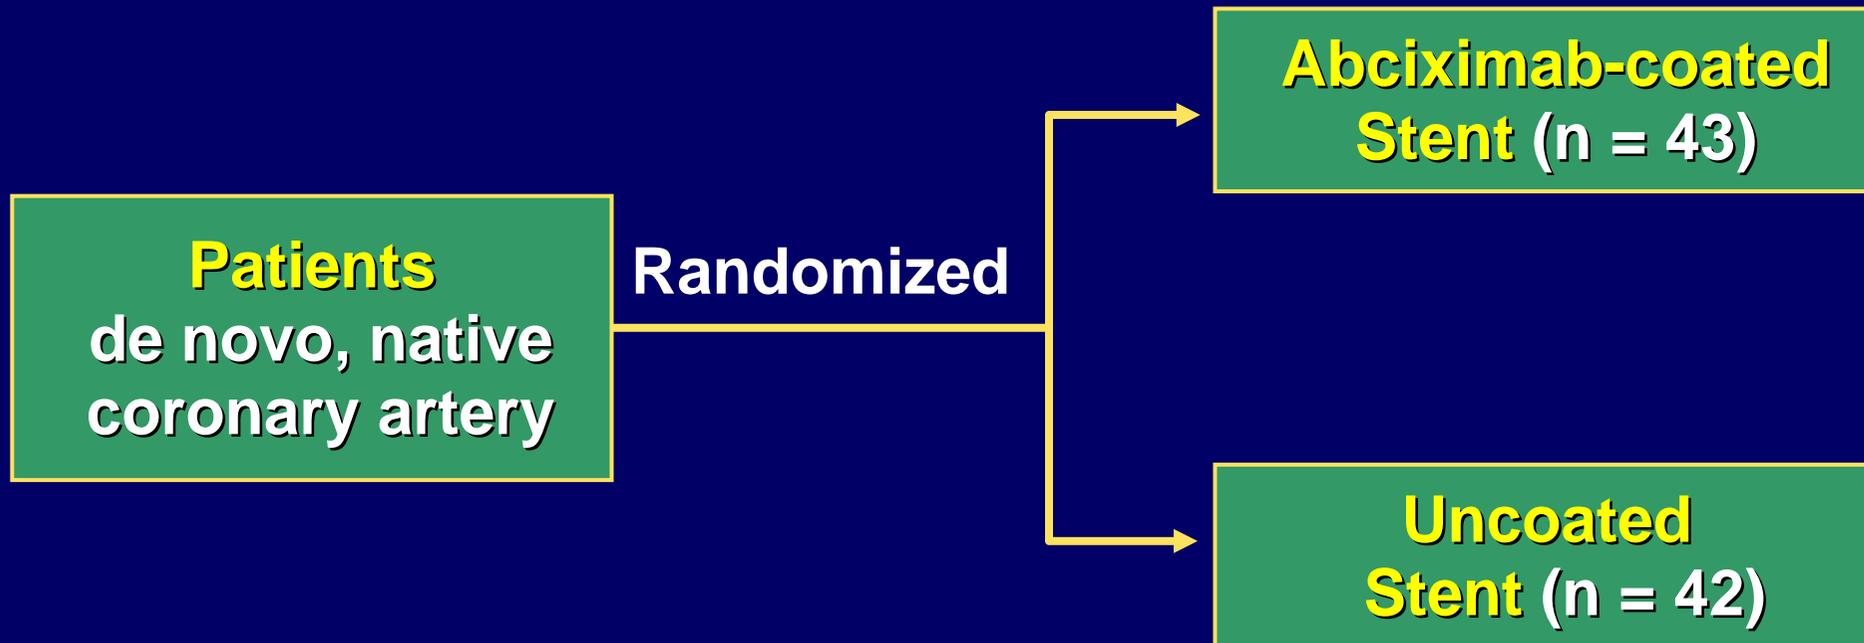

**No thrombus and small area of neointima in the ReoPro<sup>®</sup>-coated stent**

*CNUH Data. Circulation 2000;102:II-666*

# Histopathologic Assessment of Porcine Stent Restenosis Model

|   | Control    | Reopro     | P value |
|---|------------|------------|---------|
| Injury score                            | 2.07 ± 0.6 | 2.14 ± 0.8 | NS      |
| EEL area (mm <sup>2</sup> )             | 9.66 ± 1.5 | 9.44 ± 1.0 | NS      |
