

Experiences of 2nd Gen OCT in Assessment of Complex Coronary Lesions: Can It Give Us Additive Useful Information?

Alan C. Yeung, MD
Li Ka Shing Professor of Medicine
Director, Interventional Cardiology
Chief, Division of Cardiovascular Medicine (Clinical)
Stanford University School of Medicine

IVUS and OCT specifications

IVUS

OCT

2nd OCT

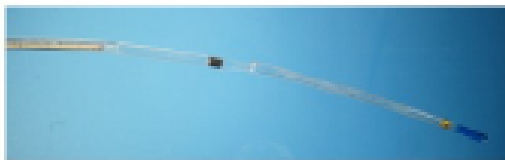

<i>Resolution</i>	<i>(axial)</i>	100 - 150 μm	10 - 15 μm	12 - 15 μm
	<i>(lateral)</i>	150 - 300 μm	25 - 40 μm	20 - 40 μm
<i>Frame rate</i>		30 frames/s	8 frames/s 20 frames/s (1/2 lateral resolution)	100 frames/s
<i>Max. scan diameter</i>		4 - 8 mm	1.0 - 2.5 mm	1.0 - 2.5 mm

Stanford

2nd Generation OCT

Fourier Domain OCT

(OFDI/Frequency/Spectral Domain/Swept Source)

 C7_{XR}		C7 Dragonfly™ Imaging Catheter	
Wavelength	1.3 μm	Short monorail tip Size: 2.7 Fr 6F Guiding compatible 0.001 4" Guide wire	
Resolution	12 - 15 μm (axial) 20 - 40 μm (lateral)		
Frame rate	100 frames/s	St. Jude Medical (Lightlab Imaging Inc)	
Pullback rate	20 mm/s		
Max. scan diameter	9.7 mm		
# A-lines/frame	504 /frame		
Tissue penetration	1.0- 2.5 mm		

FDA approved in May 2010

Case

- 77 year old man with DM, CRI, HTN, S/P multiple PCI, now with recent chest pain and ischemia on stress echo.
- '95 BMS to LAD
- '99 Brachytherapy of LAD stent
- '03 Distal edge restenosis, some problem dilating. Cypher 2.5 x 13 placed. Post dilate with 2.75, 3.0 NC. Mild 30% residual.
- '05 ISR. Balloon and cutting balloon, rotablator 1.5mm and 1.75mm. 2.5 x 24 TAXUS. 3.0 NC.
- '11 Symptoms and +stress test. Unable to dilate the LAD, IVUS cannot cross. New lesion in circumflex and distal LAD.

Case

- 64 year old man with HTN, HL and DM.
- He developed chest pain and was admitted to the hospital.
- Coronary angiogram showed a bifurcation lesion in the LAD and Diagonal branch.
- Approach: Provisional Stenting

Learning Points

- Pre-stenting side branch imaging (OCT or IVUS) may help predict whether side branch compromise post stent will occur.
- Whether main vessel side OCT view of branch ostium is adequate is unknown.
- OCT catheter goes into side strut EASILY, can verify position of new side branch guidewire and clarify severity of ostial stenosis of side-branch
