# Evidence-based Clinical Decision-Making: **Seeing the forest through the trees**

# Evidence-based Clinical Decision-Making: Seeing the forest through the trees

## **Anticoagulants (21+):**

Unfractionated heparin

Low molecular weight heparins (8): Enoxaparin, Bemiparin, Certoparin, Dalteparin, Nadroparin, Parnaparin, Reviparin, Tinzaparin

Anti-thrombins (4): Bivalirudin, Dabigatran, Argatraban, Lepirudin

Factor Xa inhibitors (7+): Fondaparinux, Rivaroxiban, Apixaban, Otamixaban, Letaxaban, Betrixaban, Danaparoid, others

Vitamin K antagonists: Warfarin

## **Antiplatelet agents (12+):**

Aspirin

First gen oral ADP antagonists (2): Ticlopidine and Clopidogrel

Second gen oral ADP antagonists (2): Prasugrel and Ticagrelor

GPIIb/IIIa inhibitors (3): Abciximab, Eptifibatide, Tirofiban

IV ( $\pm$ oral) ADP antagonists (2): Cangrelor, Elinogrel

TR antagonists (2+): Vorapaxar, Atopaxar, others

# Evidence-based Clinical Decision-Making:

## Seeing the forest through the trees

### What really matters to the patient?

# High-risk ACS: Etiology and solutions

## The Cause

Ruptured thin-cap fibroatheroma and luminal thrombus in the setting of systemic inflammation and platelet activation

## The Solution

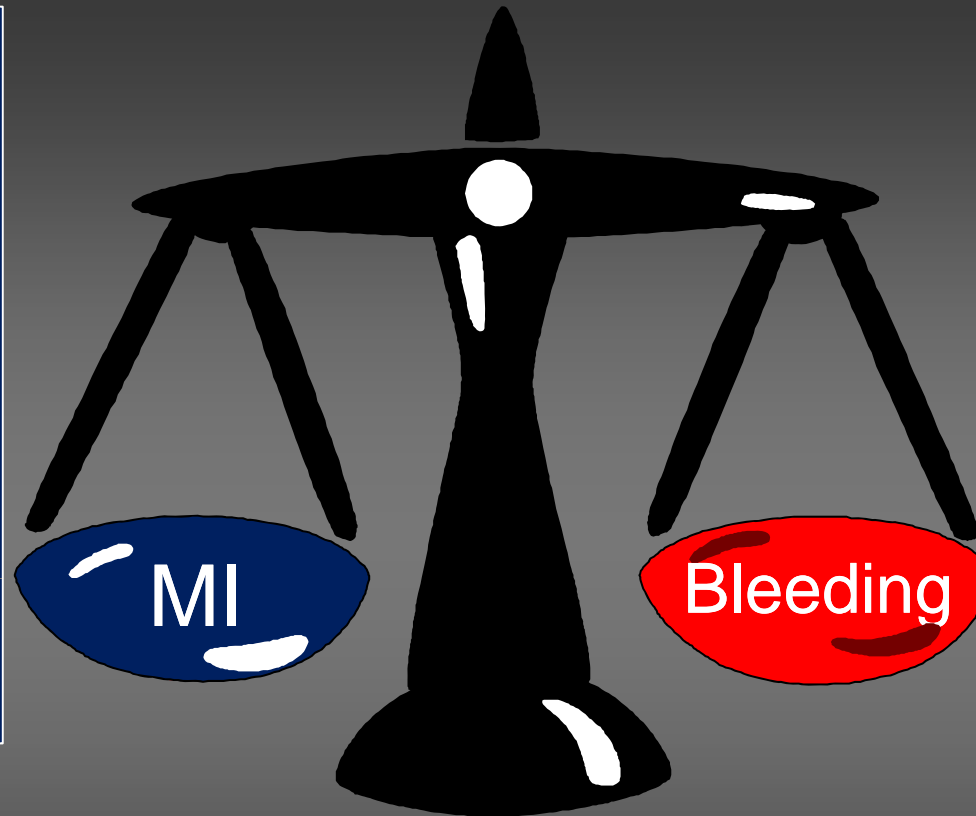

Revascularization with stenting (in most pts) to stabilize the ruptured plaque

NSTEMI/ACS: PCI ~70%

STEMI: PCI ~90%

# Impact of Myocardial Infarction and Bleeding on Subsequent Mortality

- Large MIs are prognostically important (esp Q-wave and those with angiographic complications)
- Spontaneous MIs are more important than peri-procedural MI (and deserve different thresholds for dx).

- Major and moderate bleeding are as prognostically important as MI, & impact late as well as early mortality
- Bleeding defns should be broad to capture most events, except possibly isolated hematomas

Both bleeding and MI must be suppressed for survival to be improved in ACS and PCI. Recognition of individual pt risks for atheroembolic vs. hemorrhagic complications should permit personalized decision-making to optimize outcomes on a case by case basis.

# Optimal pharmacotherapy as an adjunct to PCI is necessary to:

- 1) Allow the PCI procedure to be performed safely
- 2) Provide long-term prophylaxis

## Anticoagulants:

Unfractionated heparin

Low molecular weight heparins (8): Enoxaparin, Bemiparin, Certoparin, Dalteparin, Nadroparin, Parnaparin, Reviparin, Tinzaparin

Anti-thrombins (4): Bivalirudin, Dabigatran, Argatran, Lepirudin

Factor Xa inhibitors (7+): Fondaparinux, Rivaroxiban, Apixaban, Otamixaban, Letaxaban, Betrixaban, Danaparoid, others

Vitamin K antagonists: Warfarin

## Antiplatelet agents:

Aspirin

First gen oral ADP antagonists (2): Ticlopidine and Clopidogrel

Second gen oral ADP antagonists (2): Prasugrel and Ticagrelor

GPIIb/IIIa inhibitors (3): Abciximab, Eptifibatide, Tirofiban

IV ( $\pm$ oral) ADP antagonists (2): Cangrelor, Elinogrel

TRA inhibitors (2+): Vorapaxar, Atopaxar, others

# Optimal pharmacotherapy as an adjunct to PCI is necessary to:

- 1) Allow the PCI procedure to be performed safely
- 2) Provide long-term prophylaxis

## Focus on agents that reduce mortality

### Anticoagulants:

Heparin (UFH or LMW) + GPI vs. Bivalirudin

### Antiplatelet agents:

Clopidogrel vs. Prasugrel and Ticagrelor

# Bivalirudin vs. Heparin + GPI (n=18,819)

## Mortality at 1-year by treatment and study

■ Bivalirudin (n=9406)    ■ Heparin + GPI (n=9413)

Adj. HR [95%CI] =  
0.78 (0.55 to 1.10)  
p = 0.16

Adj. HR [95%CI] =  
0.96 (0.77 to 1.18)  
p = 0.67

Adj. HR [95%CI] =  
0.71 (0.51 to 0.98)  
p = 0.038

Adj. HR [95%CI] =  
0.84 (0.72 to 0.99)  
p = 0.035

# Bivalirudin vs. Heparin + GPIIb/IIIa

N = 127,185 pts undergoing PCI 2003-2006

(Premier Perspective Database, ~1/6<sup>th</sup> of all US hosps; bival in 26%)

## In-hospital death

Bivalirudin    H+GPI

0.8%      2.1%

# Prasugrel and Ticagrelor in ACS

## TIMI CABG-related major bleeding

**TRITON-TIMI-38 (n=13,608)**  
15 months

**PLATO (n=18,624)**  
12 months

■ Clopidogrel (n=6795) ■ Prasugrel (n=6813) ■ Clopidogrel (n=9291) ■ Ticagrelor (n=9333)

# Prasugrel and Ticagrelor in ACS

## Fatal or life-threatening bleeding

**TRITON-TIMI-38 (n=13,608)**  
15 months

**PLATO (n=18,624)**  
12 months

■ Clopidogrel (n=6795) ■ Prasugrel (n=6813) ■ Clopidogrel (n=9291) ■ Ticagrelor (n=9333)

# Prasugrel and Ticagrelor in ACS

## Mortality

**TRITON-TIMI-38 (n=13,608)**  
15 months

**PLATO (n=18,624)**  
12 months

■ Clopidogrel (n=6795) ■ Prasugrel (n=6813) ■ Clopidogrel (n=9291) ■ Ticagrelor (n=9333)

# Why does Ticagrelor, but not Prasugrel, Reduce Mortality in ACS?

1. Both agents significantly reduce hard ischemic events, but only ticagrelor is able to do so without increasing life-threatening or fatal bleeding (shorter  $t_{1/2}$ , reversible)

**OR**

2. Ticagrelor (but not prasugrel) has favorable off-target effects (blocks rbc adenosine re-uptake)

**But it's probably mostly about ischemia vs. bleeding!**

# Evidence-based Medicine Pharmacotherapy Decisions: **Conclusions I**

1. Effective treatment for most patients with angina, ischemia and high-risk ACS requires revascularization
2. Antithrombin and antiplatelet agents are necessary to suppress short- and long-term ischemia and MI, but must be used appropriately so potential hemorrhagic complications do not outweigh their benefits

# Evidence-based Medicine Pharmacotherapy

## Decisions: **Conclusions I**

3. The risk-benefit profile of bivalirudin has been strongly associated with improved early and late survival
4. The potent ADP antagonist ticagrelor has been shown to further reduce mortality in ACS given its ability to suppress ischemia without increasing life-threatening or fatal bleeding (and/or blocking adenosine re-uptake); thus, absent a head-to-head trial against prasugrel, ticagrelor should be the agent of choice in most pts with STEMI or NSTEMI
  - Ticagrelor (and prasugrel) should be highly synergistic with bivalirudin, although data in this regard are also lacking

**Finally:** If you can see the forest  
through the trees....

**If you can see the forest through the  
trees....**

**You'll find a happy and healthy patient**
